

nimble®

the one finger package opener

Nimble is the world's first one-finger cutter that allows those with limited hand function to safely and easily cut plastic packaging, cardboard boxes, paper and more. Better yet, Nimble's safe blade profile means you can't cut yourself!

Ideal for those with limited hand mobility, joint pain, little to no hand strength, hand tremors, reduced hand-eye coordination, deformed or swollen hands and for people with only one usable hand such as stroke victims or amputees.

A special blade design means that although Nimble cuts through plastic and paper easily, it won't cause serious injury like scissors or knives. Made from an ultra-hard zirconia ceramic blade which holds a sharper edge than steel and won't rust. One size fits all.
