## Limb Difference Gripping Aid

**The Limb Difference Gripping Aid by Active Hands allows users with a limb difference affecting their fingers or hands to participate in a range of activities around the home, gym or outdoors. When tightened the gripping aids gently pull the hand into a fist shape and can be adjusted to hold items in the palm.**

Ideal for those who have some or all of their fingers, or parts of their hand missing including those with conditions from birth, amputation, injury or illness.

*Examples of limb difference*

As long as the user has some widening at their wrist, the gripping aid should work.

Note: A wider section of the wrist is required as an anchor point to transfer the pulling force to, when using the gripping aid.

## Examples of use:

- Using equipment in the gym, kitchen or garden
- Holding the handlebars on a bike
- Holding the oars while rowing or kayaking
- Weight lifting

## Sizing:

- Standard adult sizing
- Fits 135mm - 170mm wrist circumference (see 'A')
- Left or right (each sold separately)
- Small or large sizing for purchase only / special order
